

RSC-BMCS Hall of Fame and Medal 2024

Announcement of Winner

The BMCS is delighted to announce that **Dr Mike Hann** (formerly of GSK) will be the 2024 inductee to its Hall of Fame, and the recipient of the associated medal.

Mike's contributions to medicinal chemistry and drug discovery span multiple aspects, encompassing computational chemistry, chemoinformatics and chemical biology. He is renowned for his seminal contributions to fragment-based hit discovery as well as important contributions to automated / virtual compound library design. He is also synonymous with druggability / tractability assessment, and lipophilicity control. Mike has also made important contributions to the importance and measurement of intracellular drug concentrations.

Mike is also recognized as an excellent communicator and for his role in educating future generations, being viewed as one of the key scientists that should be highlighted for future generations of researchers to know about.

Look out for date and venue for Mike's medal presentation and award lecture, details of which will be confirmed soon.

The purpose of this award is to recognize prominent chemists for outstanding, sustained, and significant scientific impact, or contributions to any area of interest to the BMCS, e.g., medicinal chemistry, agriscience, bioorganic chemistry, chemical biology.
